

<b>Program Name:</b> BCA(IV semester)	<b>Course Title:</b> PHP and MySQL Lab
<b>Course Code:</b> DSC17-Lab	<b>Hours/Week:</b> 04
<b>Course Credits:</b> 02 (0-0-2)	<b>Exam Duration:</b> 02 hours
<b>Exam Marks:</b> 25	<b>Formative Assessment Marks:</b> 25

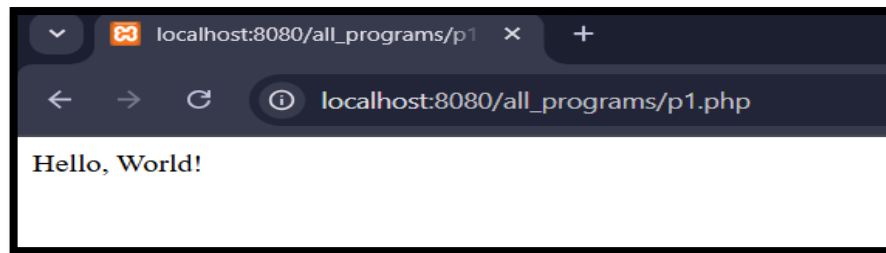

**Laboratory Program List**

<b>Sl. No</b>	<b>Title of the Experiment</b>
<b>1</b>	Write a PHP script to print "hello world"
<b>2</b>	Write a PHP script to find odd or even number from given number.
<b>3</b>	Write a PHP script to find maximum of three numbers.
<b>4</b>	Write a PHP script to swap two numbers.
<b>5</b>	Write a PHP script to find the factorial of a number.
<b>6</b>	Write a PHP script to check whether given number is palindrome or not
<b>7</b>	Write a PHP script to reverse a given number and calculate its sum
<b>8</b>	Write a PHP script to generate a Fibonacci series using Recursive function
<b>9</b>	Write a PHP script to implement at least seven string functions.
<b>10</b>	Write a PHP program to insert new item in array on any position in PHP.
<b>11</b>	Write a PHP script to implement constructor and destructor
<b>12</b>	Write a PHP script to implement form handling using get method
<b>13</b>	Write a PHP script to implement form handling using post method.
<b>14</b>	Write a PHP script that receive form input by the method post to check the number is prime or not
<b>15</b>	Write a PHP script that receive string as a form input
<b>16</b>	Write a PHP script to compute addition of two matrices as a form input.
<b>17</b>	Write a PHP script to show the functionality of date and time function.
<b>18</b>	Write a PHP program to upload a file
<b>19</b>	Write a PHP script to implement database creation
<b>20</b>	Write a PHP script to create table
<b>21</b>	Develop a PHP program to design a college admission form using MYSQL database

1. Write a PHP script to print "hello world"

```
<?php  
echo "Hello, World!";  
?>
```

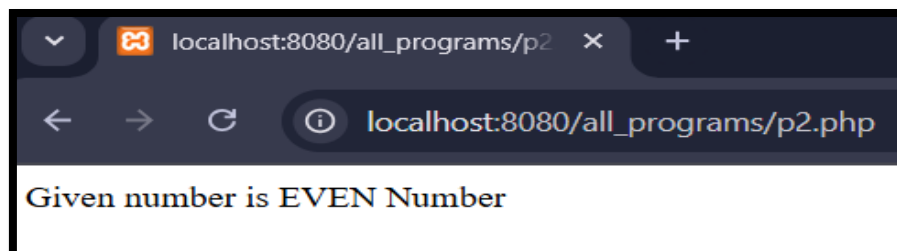

OUTPUT:

2. Write a PHP script to find odd or even number from given number.

```
<?php  
$num= 6;  
if($num%2==0)  
{  
echo "Given number is EVEN Number";  
}  
else  
{  
echo "Given number is ODD Number";  
}  
?>
```

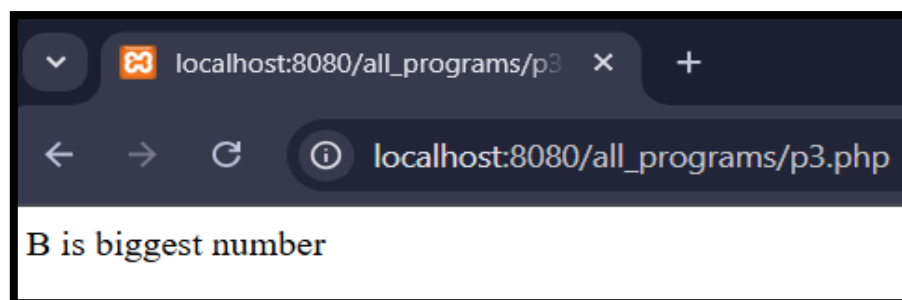

OUTPUT:

**3. Write a PHP script to find maximum of three numbers.**

```
<?php
$a=3;
$b=4;
$c=2;
if($a>$b&&$a>$c)
{
    echo "A is biggest number";
}
else if($b>$c)
{
    echo "B is biggest number";
}
else
{
    echo "C is biggest number";
}
?>
```

**OUTPUT:**

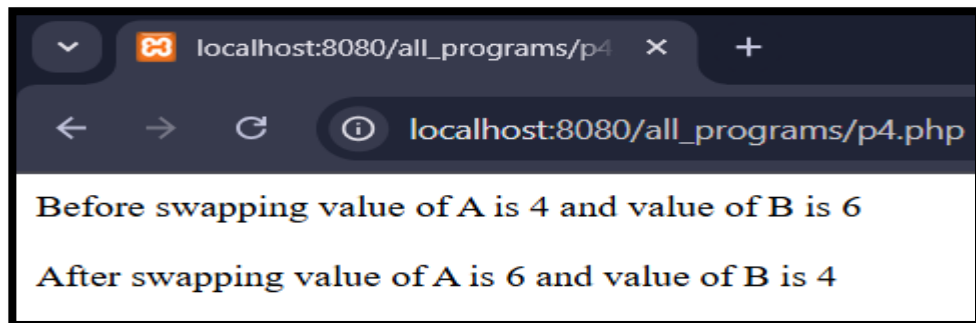

**4. Write a PHP script to swap two numbers.**

```
<?php
$a=4;
$b=6;
echo "Before swapping value of A is $a and value of B is $b</br></br>";
$a=$a+$b;
```

```
$b=$a-$b;  
$a=$a-$b;  
echo "After swapping value of A is $a and value of B is $b";  
?>
```

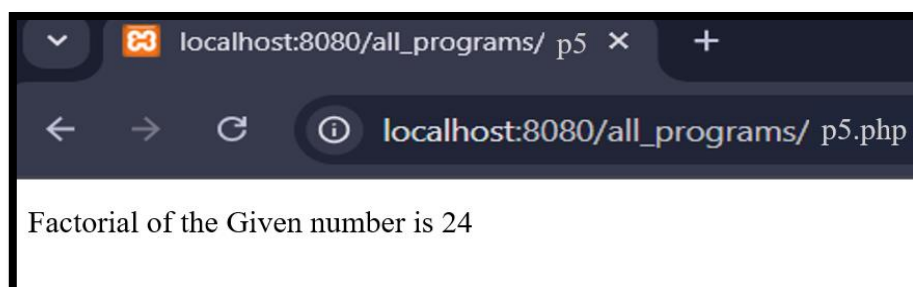

**OUTPUT:**

**5. Write a PHP script to find the factorial of a number.**

```
<?php  
$n=4;  
$f=1;  
for($i=1;$i<=$n;$i++)  
{  
$f*=$i;  
}  
echo "Factorial of the given number is $f";  
?>
```

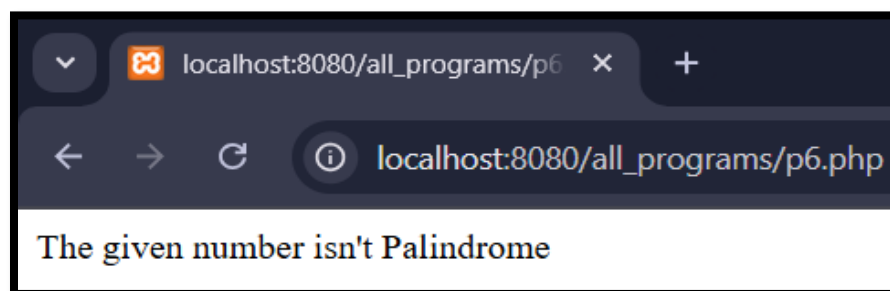

**OUTPUT:**

**6. Write a PHP script to check whether given number is palindrome or not.**

```
<?php
$num=123;
$rev=0;
$temp=$num;
while($num>1)
{
    $r=$num%10;
    $rev=$rev*10+$r;
    $num=$num/10;
}
if($rev==$temp)
{
    echo "The given number is Palindrome";
}
Else
{
    echo "The given number isn't Palindrome";
}
?>
```

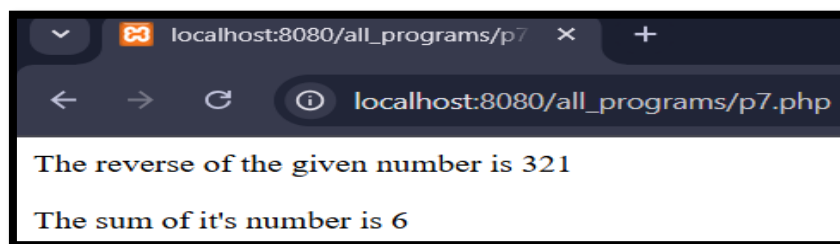

**OUTPUT:**

**7. Write a PHP script to reverse a given number and calculate its sum.**

```
<?php
$num=123;
$rev=0;
$sum=0;
while($num>1)
{
    $r=$num%10;
    $sum=$sum+$r;
    $rev=$rev*10+$r;
    $num=$num/10;
}
echo "The reverse of the given number is $rev</br></br>";
echo "The sum of it's number is $sum";
?>
```

**OUTPUT:**

**8. Write a PHP script to generate a Fibonacci series using Recursive function.**

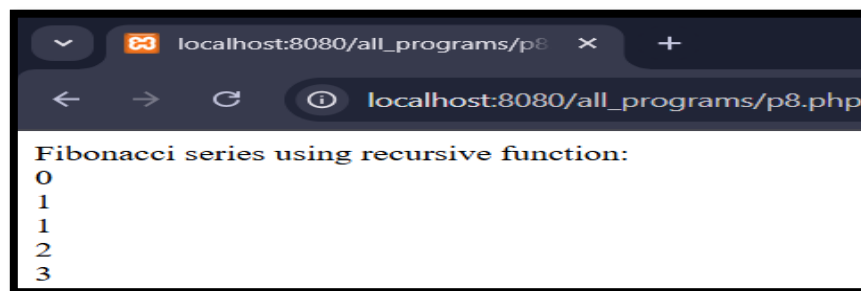

```
<?php
$num=5;
echo "Fibonacci series using recursive function:</br>";
function fibo($num)
{
    if($num==0)
```

```

{
    return 0;
}
else if($num==1)
{
    return 1;
}
else
{
    return(fibo($num-1) + fibo($num-2));
}
}
for($i=0;$i<$num;$i++)
{
    echo fibo($i);
    echo "</br>";
}
?>

```

**OUTPUT:**

**9. Write a PHP script to implement at least seven string functions.**

```

<?php

$text = "Hello PHP";

echo "String length: ".strlen($text) . "<br><br>";

echo "Convert to uppercase: ".strtoupper($text) . "<br><br>";

```

```
echo "Convert to lowercase: ".strtolower($text) . "<br><br>";

echo "Reverse the string: ".strrev($text) . "<br><br>";

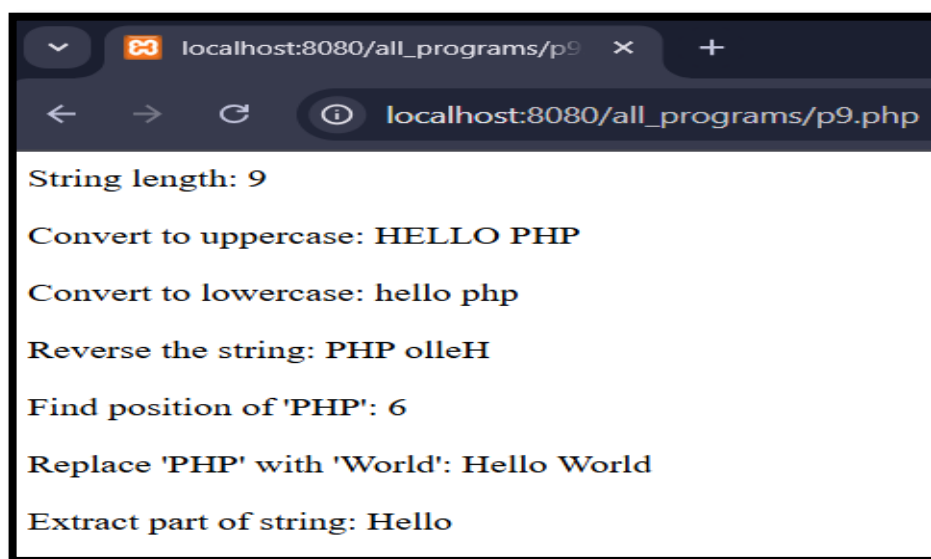

echo "Find position of 'PHP': ".strpos($text, "PHP") . "<br><br>";

echo "Replace 'PHP' with 'World': ".str_replace("PHP", "World", $text) . "<br><br>";

echo "Extract part of string: ".substr($text, 0, 5) . "<br><br>";

?>
```

**OUTPUT:**

**10. Write a PHP program to insert new item in array on any position in PHP.**

```
<?php

// Original array
$array = array("Apple", "Banana", "Cherry", "Mango");

echo "Before Insertion:<br>";

foreach ($array as $item) {
    echo $item . "<br>"; // Print each item with a break
}

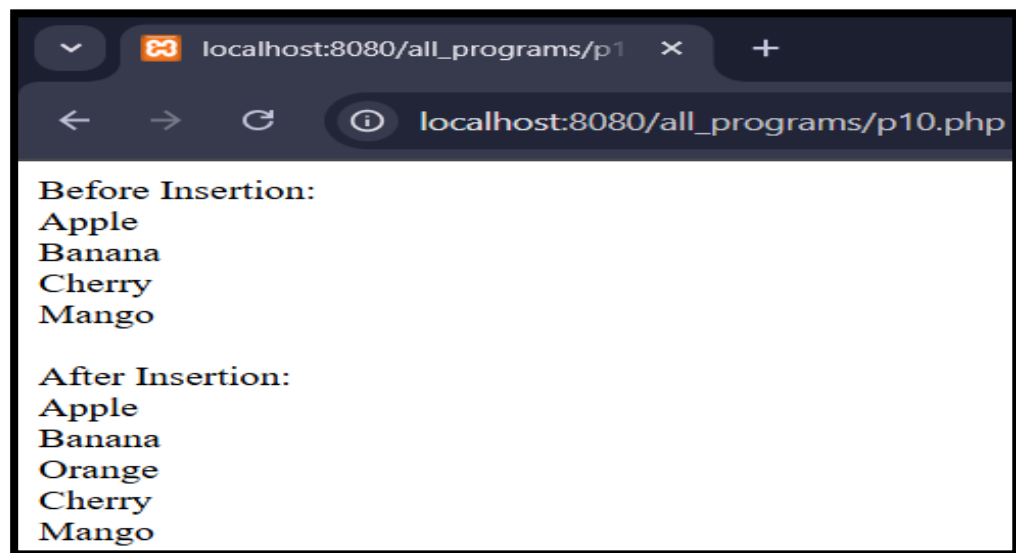

echo "<br>"; // Extra space

// New item to insert
```

```
$newItem = "Orange";  
$position = 2; // Insert at index 2  
  
// Insert the new item at the specified position  
array_splice($array, $position, 0, $newItem);  
  
echo "After Insertion:<br>";  
foreach ($array as $item) {  
    echo $item . "<br>"; // Print each item one by one  
}  
?>
```

**OUTPUT:**

**11. Write a PHP script to implement constructor and destructor**

```
<?php  
class Test {  
    public $name;  
    // Constructor with a variable  
    public function __construct($name) {  
        $this->name = $name;  
        echo "Constructor: Object Created for $this->name!<br>";  
    }  
}
```

```

}

// Destructor

public function __destruct() {
    echo "</br>Destructor: Object for $this->name is Destroyed!<br>";
}

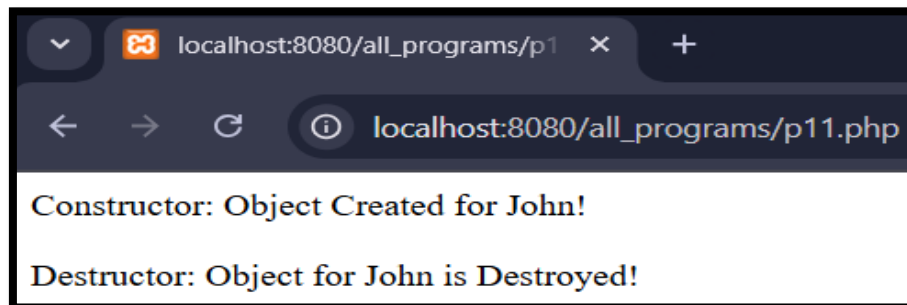

}

// Creating an object with a name
$obj = new Test("John");

?>

```

**OUTPUT:**

## 12. Write a PHP script to implement form handling using get method.

```

<!DOCTYPE html>

<html>

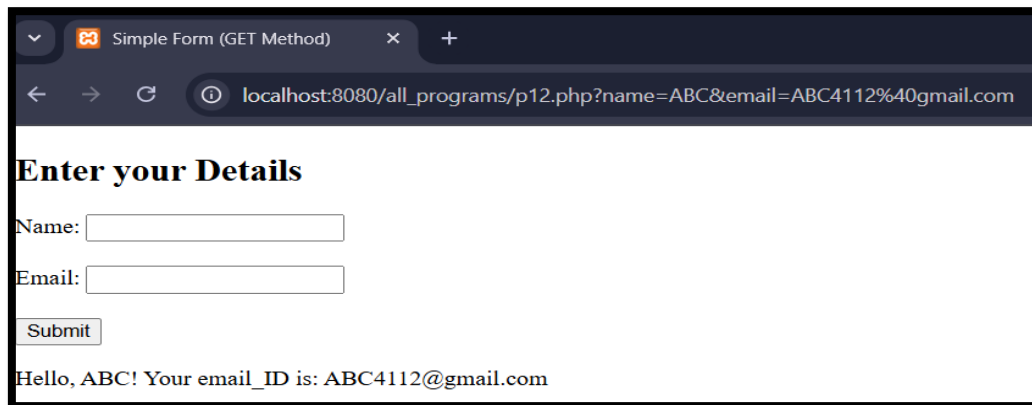

<head>
    <title>Simple Form (GET Method)</title>
</head>

<body>
    <h2>Enter your Details</h2>
    <form method="get">
        <label for="name">Name:</label>
        <input type="text" id="name" name="name" required><br><br>
        <label for="email">Email:</label>
        <input type="text" id="email" name="email" required><br><br>
        <input type="submit" value="Submit">
    </form>

```

```
<?php
// If the form is submitted and name and email are available, display them
if (isset($_GET['name']) && isset($_GET['email'])) {
    echo "<p>Hello, " . $_GET['name'] . "! Your email_ID is: " . $_GET['email'] . "</p>";
}
?>
</body>
</html>
```

**OUTPUT:**

**13. Write a PHP script to implement form handling using post method.**

```
<!DOCTYPE html>
<html>
<head>
    <title>Simple Form Handling - POST Method</title>
</head>
<body>
    <h2>Simple Form</h2>
    <form method="post">
        <label for="name">Name:</label>
        <input type="text" id="name" name="name" required><br><br>
        <label for="email">Email:</label>
        <input type="email" id="email" name="email" required><br><br>
```

```
<input type="submit" value="Submit">

</form>

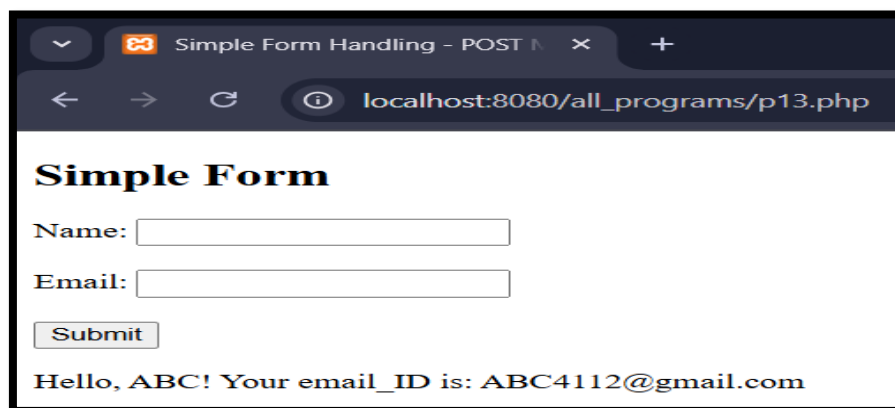

<?php
if ($_SERVER['REQUEST_METHOD'] == 'POST')
{
    if (isset($_POST['name']) && isset($_POST['email'])) {
        echo "<p>Hello, " . ($_POST['name']) . "! Your email_ID is: " . ($_POST['email']) . "</p>";
    }
}

?>

</body>

</html>
```

**OUTPUT:**

**14. Write a PHP script that receive form input by the method post to check the number is prime or not.**

```
<!DOCTYPE html>

<html>

<head>

    <title>Prime Number Checker</title>

</head>

<body>

    <h2>Check Prime Number</h2>

    <form method="POST">
```

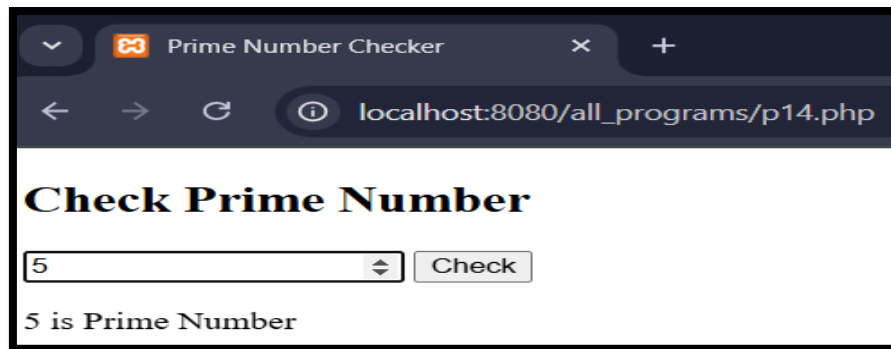

```
<input type="number" name="num" required>
<input type="submit" value="Check">
</form>

<?php
if (isset($_POST['num'])) {
    $num = $_POST['num'];
    $is_prime = true;

    if ($num < 2) {
        $is_prime = false;
    } else {
        for ($i = 2; $i < $num; $i++) {
            if ($num % $i == 0) {
                $is_prime = false;
                break;
            }
        }
    }

    echo $is_prime ? "<p>$num is Prime</p>" : "<p>$num is Not Prime</p>";
}
?>
</body>
</html>
```

OUTPUT:

15. Write a PHP script that receive string as a form input.

```
<!DOCTYPE html>

<html>

<head>

    <title>String Input Form</title>

</head>

<body>

    <h2>Enter a String</h2>

    <form method="POST">

        <input type="text" name="user_string" required>

        <input type="submit" value="Submit">

    </form>

    <?php

    if (isset($_POST['user_string'])) {

        $input_string = htmlspecialchars($_POST['user_string']);

        echo "<p>You entered: " . $input_string . "</p>";

    }

    ?>

</body>

</html>
```

OUTPUT:

16. Write a PHP script to compute addition of two matrices as a form input.

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
    <title>Matrix Addition</title>
```

```
</head>
```

```
<body>
```

```
<h2>Enter values for two 2x2 matrices:</h2>
```

```
<form method="post">
```

```
    <h3>Matrix A</h3>
```

```
    <input type="number" name="a00"> <input type="number" name="a01"><br>
```

```
    <input type="number" name="a10"> <input type="number" name="a11"><br>
```

```
    <h3>Matrix B</h3>
```

```
    <input type="number" name="b00"> <input type="number" name="b01"><br>
```

```
    <input type="number" name="b10"> <input type="number" name="b11"><br><br>
```

```
    <input type="submit" name="add" value="Add Matrices">
```

```
</form>
```

```
<?php
```

```
if (isset($_POST['add']))

    $a00 = $_POST['a00'];
    $a01 = $_POST['a01'];
    $a10 = $_POST['a10'];
    $a11 = $_POST['a11'];

    $b00 = $_POST['b00'];
    $b01 = $_POST['b01'];
    $b10 = $_POST['b10'];
    $b11 = $_POST['b11'];

    $c00 = $a00 + $b00;
    $c01 = $a01 + $b01;
    $c10 = $a10 + $b10;
    $c11 = $a11 + $b11;

    echo "<h3>Result (A + B):</h3>";
    echo "$c00 $c01<br>";
    echo "$c10 $c11<br>";
}

?>

</body>
</html>
```

OUTPUT:

Matrix Addition

localhost:8080/all\_programs/p16.php

**Enter values for two 2x2 matrices:**

**Matrix A**

**Matrix B**

**Result (A + B):**

2 4  
6 8

17. Write a PHP script to show the functionality of date and time function.

```
<?php
date_default_timezone_set("Asia/Kolkata");    // Change this to your timezone
echo "Today is: " . date("d-m-Y") . "<br>";
echo "Time now is: " . date("h:i A");
?>
```

OUTPUT:

localhost:8080/all\_programs/p17.php

Today is: 11-04-2025  
Time now is: 05:17 PM

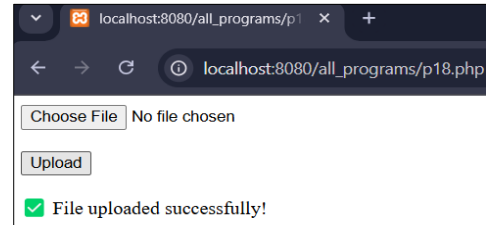

18. Write a PHP program to upload a file.

```
<form method="post" enctype="multipart/form-data">
    <input type="file" name="file"><br><br>
    <input type="submit" name="upload" value="Upload">
</form>

<?php
if (isset($_POST['upload'])) {
    if (move_uploaded_file($_FILES["file"]["tmp_name"], $_FILES["file"]["name"])) {
        echo "✔ File uploaded successfully!";
    } else {
```

```
        echo "✗ No file uploded.";
    }
}
?>
```

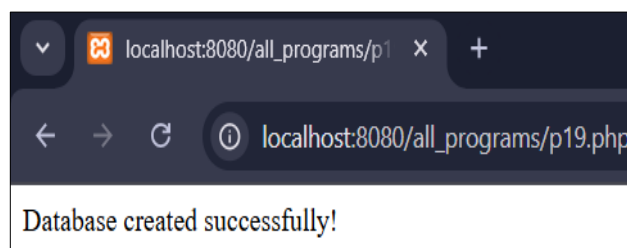

**OUTPUT:**

**19. Write a PHP script to implement database creation**

```
<?php
$conn = mysqli_connect("localhost", "root", "");
if ($conn) {
    $sql = "CREATE DATABASE mydb";
    if (mysqli_query($conn, $sql)) {
        echo "Database created successfully!";
    } else {
        echo "Error creating database.";
    }
} else {
    echo "Connection failed!";
}
?>
```

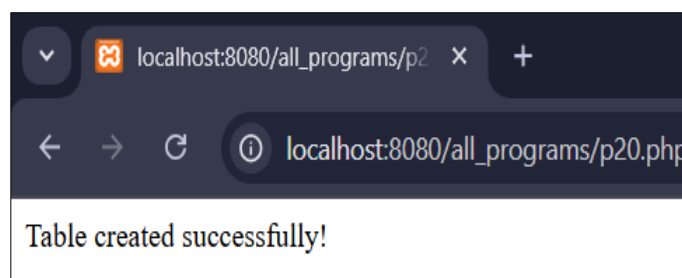

**OUTPUT:**

**20. Write a PHP script to create table.**

```
<?php
$conn = mysqli_connect("localhost", "root", "", "mydb");
if ($conn) {
    $sql = "CREATE TABLE mytable (id INT, name VARCHAR(50))";
    if (mysqli_query($conn, $sql)) {
        echo "Table created successfully!";
    } else {
        echo "Error creating table.";
    }
} else {
    echo "Connection failed!";
}
?>
```

**OUTPUT:**

**21. Develop a PHP program to design a college admission form using MYSQL database.**

```
<?php
// Step 1: Connect to MySQL and create DB + table if not exist
$conn = mysqli_connect("localhost", "root", "");

mysqli_query($conn, "CREATE DATABASE IF NOT EXISTS college");
mysqli_select_db($conn, "college");

$sql = "CREATE TABLE IF NOT EXISTS admission (
    id INT AUTO_INCREMENT PRIMARY KEY,
```

```
name VARCHAR(100),
email VARCHAR(100),
course VARCHAR(50)
);
mysqli_query($conn, $sql);

// Step 2: Handle form submission
if (isset($_POST['submit'])) {
    $name = $_POST['name'];
    $email = $_POST['email'];
    $course = $_POST['course'];

    $insert = "INSERT INTO admission (name, email, course)
        VALUES ('$name', '$email', '$course')";

    if (mysqli_query($conn, $insert)) {
        echo "✔ Admission form submitted successfully!<br><br>";
    } else {
        echo "✗ Error submitting form.<br><br>";
    }
}
?>
```

<!-- Step 3: Display the form -->

```
<form method="post">
    Name: <input type="text" name="name" required><br><br>
    Email: <input type="email" name="email" required><br><br>
    Course:
    <select name="course" required>
        <option value="BCA">BCA</option>
        <option value="BBA">BBA</option>
```

```
<option value="BSc">BSc</option>  
</select><br><br>  
<input type="submit" name="submit" value="Submit">  
</form>
```

**OUTPUT:**

A screenshot of a web browser window. The address bar shows 'localhost:8080/all\_programs/p21.php'. The page content displays a green checkmark icon followed by the text 'Admission form submitted successfully!'. Below this, there are three input fields: 'Name:' with the value 'h', 'Email:' with the value 'tt@gmail.com', and 'Course:' with a dropdown menu showing 'BCA'. At the bottom of these fields is a 'Submit' button.
